

# E-Dot™ INSTRUCTIONS

Congratulations on purchasing one of the many ADCO Dot Sights. This product has four outstanding features in comparison to other more traditional optical sight systems such as scopes. There is no faster sighting instrument.

1. The eye relief is unlimited.
2. Instead of a "crosshair" there is a red dot with adjustable intensity.
3. Head position is not important as long as the dot is seen on the target you can shoot (once zeroed in) and get an accurate shot.
4. It can be used with one eye or both eyes open.

## MOUNTING

The ECB model has designed into it, mounts for easy mounting onto grooves of either 3/8" or 7/8" width. You will see that you can remove the clamps and turn them over to change the ECB model to either size mounting system. In addition, one of the screws can slide forward or backward so that the screw will fit into the cross locking groove in many mounts. Simply loosen and slide on the mounts then tighten the screws on the side till the sight is secured tightly onto the grooves. A promotional model, the RD30 comes in black only and may have mounting built in for 7/8" dovetails only.

A wider version, the EMB or EMN is a 47mm model which also has interchangeable mounting to 3/8" or 7/8".

The E1B and E30B are sights that mount much like a normal scope. Rings are included in the package that will interface with the popular 7/8" mount.

## DOT INTENSITY ADJUSTMENT

Make sure the switch is in the "O" position when not in use. In order to turn the dot on, set the dial to any number from 1 to 11 with the higher numbers having the brightest display of the dot. Your selection, lower to brighter, will be based on the ambient light of your target area. The dot works best at the lowest setting your shooting environment allows.

## ZEROING

The screw on the side, (after removing the cap), adjusts windage from right to left. The screw on top of the sight moves the dot up and down. A few shots at close range should be taken to begin with. Then move further away to fine tune the adjustments to your setting requirements. REMEMBER, THE UNIT MUST BE FITTED TIGHTLY BEFORE YOU ZERO IN AND THAT IF STORED FOR A TIME OR REMOUNTING, READJUSTING THE "ZERO" IS NEEDED.

## **BATTERY INSTALLATION**

There is a slotted cap on the face of the dial that is numbered 0-11 for brightness adjustments of the dot. Under the slotted cap is the battery compartment. Simply take a coin and hold the compartment while turning the cap counterclockwise with the coin. This will uncover the battery. It is a commonly found 2032 size lithium battery. Please note the way the battery lies in the compartment, then remove it. Replace the old battery with a fresh one and put the cap back on. If there is no dot after you replace your battery you may have the battery in backwards.

## **LIMITED WARRANTY**

When putting your sight into service during the zeroing in period, you should examine the sight fully and if any defects are found contact us at 800-775-3687 for return instructions and fast replacement.

For one year, if defects are found to have developed due to manufacturing or workmanship, send the sight back to us for repair or replacement with the original dated sales slip and \$9.50 S&H.

For minor repairs not under warranty please return the sight with a shipping and handling charge payment of \$35. This prepayment facilitates immediate repairs and is so time saving that often any small additional charges that may have been due can be overlooked to aid expediency.

## **PAINTBALL WARRANTY**

If you are a paintball player and your ECB or ECN sight is damaged in any way during the game, simply return the sight with \$25 to cover shipping and handling and ADCO will replace your sight with a new one. It will be sent back to you by the most convenient "Express Service" for your situation.

**ALL RETURNS MUST BE FREIGHT PAID!**
